**Ref.: LI1005**

## SUSPENSION SYSTEM FOR TIBIAL PROSTHESES

**Characteristics:**

Lykra-coated silicone suspension system for tibial prostheses. Being made of silicone, it adheres to both the hard fitting of the prosthesis and the patient's thigh, providing a perfect fit between socket and stump and avoiding a sliding effect from the prosthesis. It also prevents the entry of air through the proximal part of the fitting, managing to maintain the vacuum required for the proper functioning of the prosthesis. The elasticity of the materials used allows great freedom of movement, even in knee flexion.

**Properties:**

The Orliman tibial suspension system provides the necessary adjustment for proper function of the tibial prosthesis; as it is made from silicone it grips the thigh as required in order to keep the prosthesis properly fitted. This, coupled with not allowing the entry of air through the proximal part of the fitting, prevents against sliding, thus reducing the friction between the stump and the hard fitting and protecting the stump against possible injury due to friction.

**Colour:**

■ Beige.
